ITA Report n°21 - **Handling, Treatment and Disposal of Tunnel Spoil Materials**
N°ISBN : 978-2-9701242-0-7 / APRIL 2019 - Layout : Longrine – Avignon – France – www.longrine.fr

The International Tunnelling and Underground Space Association/Association Internationale des Tunnels et de l'Espace Souterrain (ITA/AITES) publishes this report to, in accordance with its statutes, facilitate the exchange of information, in order: to encourage planning of the subsurface for the benefit of the public, environment and sustainable development to promote advances in planning, design, construction, maintenance and safety of tunnels and underground space, by bringing together information thereon and by studying questions related thereto. This report has been prepared by professionals with expertise within the actual subjects. The opinions and statements are based on sources believed to be reliable and in good faith. However, ITA/AITES accepts no responsibility or liability whatsoever with regard to the material published in this report. This material is: information of a general nature only which is not intended to address the specific circumstances of any particular individual or entity; not necessarily comprehensive, complete, accurate or up to date; This material is not professional or legal advice (if you need specific advice, you should always consult a suitably qualified professional).

HANDLING, TREATMENT AND DISPOSAL OF TUNNEL SPOIL MATERIALS

Working Groups 14 and 15
Underground Construction and the
Environment and Mechanized Tunnelling

>> TABLE OF CONTENTS

1 INTRODUCTION.....	6
2 ACKNOWLEDGEMENTS	8
3 SUMMARY AND INTRODUCTION	9
4 OPPORTUNITIES FORTUNNEL SPOIL	10
4.1 Temporary construction purposes	14
4.2 Embankments, landfill and erosion protection.....	14
4.3 Earth and rock fill dams.....	15
4.3.1 Førsvatn Earth and Rock Fill Dam, Norway.....	15
4.3.2 Some Comments to Blasted Tunnel Spoil.....	16
4.3.3 Studies for Utilizing Crushed Rock as Impervious Core.....	16
4.4 Tunnel Spoil from TBM Rock Tunnels	18
4.4.1 Typical Strengths of Different Rock Types	23
4.5 Construction Aggregates and Ballast	23
4.5.1 Some Basic Requirements	24
4.6 Tunnel Spoil from Soft Ground TBM Tunnels	25
4.7 Sampling and Testing	26
4.7.1 Some Relevant Tests.....	27
4.7.2 Procedures for On-Site Testing.....	27
4.8 Alternative Excavation Methods.....	29
5 CHALLENGES	31
5.1 Geology and Ground Conditions	31
5.2 Excavation	31
5.3 Logistics, Management, Handling and Transportation of Muck	34
5.4 Temporary Storage and Permanent Deposits	36
6 CONTRACTUAL ISSUES	38
7 RECOMMENDATIONS AND CHECK LIST	39
7.1 Recommendations	39
7.1.1 Planning Stage.....	39
7.1.2 Preparation of Contract Documents	39
7.1.3 Construction	39
7.1.4 Operation and Post Operational Stage.....	39
7.2 Check Lists	39
7.2.1 Planning Stage.....	39

>> TABLE OF CONTENTS

7.2.2 Contract.....	39
7.2.3 Construction Stage	39
7.2.4 Post Construction Stage	39
8 RECEIVED QUESTIONNAIRES AND SELECTED PAPERS	40
8.1 Questionnaires	40
8.2 Selected Case Studies	41
8.2.1 Suhua Highway Improvement Project, Taiwan	41
8.2.2 Caopu Tunnel, Taiwan	44
8.2.3 Northside Storage Tunnel Project, Sydney, Australia.....	46
8.2.4 Crossrail Project, London, England	49
8.2.5 Le Farette, Romande Energie Hydropower, Switzerland	49
8.2.6 Gotthard Base Tunnel - Materials Management for 15 Years	50
8.2.7 Mechanized Tunnelling with EPB TBMs; Environmental Aspects - Aspects of Soil Conditioning Process The Approach in Italy.....	54
8.2.8 Nobilitation of Tunnelling Waste as Building Material - Issues and Solutions.....	55
9 REFERENCES	57
10 RFURTHER READINGS MATERIALS	58
11 ENCLOSURES.....	59
11.1 Questionnaire Format.....	59

TABLES

1. Projects Referenced in the Report	7
2. Example of Actual Projects with EXMAT Quantities	13
3. Rock Material Properties	23
4. Material Tests – Tunnel Spoil.....	27
5. Rock Hardness Requirements.....	28
6. Petrographic Requirements.....	28
7. Handling, Treatment and Disposal Tunnel Muck.....	40
8. Characteristics of Tunnels in the Suhua Highway Improvement Project.....	41
